

PROTEIN CHROMATOGRAPHY - ENGINEERING FUNDAMENTALS AND MEASUREMENT FOR PROCESS DEVELOPMENT AND SCALE-UP

9TH TO 14TH OF JANUARY 2022, VIENNA, AUSTRIA

Held by: Prof. Alois Jungbauer; Department of Biotechnology, University of Natural Resources and Life Sciences Vienna, Austria
Prof. Giorgio Carta; Department of Chemical Engineering, University of Virginia, Charlottesville, VA, USA

Aim

Chromatography became an indispensable tool in research and development in biotechnology. The method is frequently applied for analytical and preparative separation purposes. Equipment, separation media and auxiliary materials have reached a very advanced level. The course will provide insight in the basic theories on chromatography and the fundamental relationships to understand the function of new media developed for high throughput and high capacity. The course will present the necessary chromatographic theory and give the participants an opportunity to apply the theory to experimental laboratory data.

Course description

The scope of the course is to provide insight in the application of chromatographic theory with special emphasis on mass transfer and dispersion.

The theory will cover the fundamentals, the sorption equilibria, modes of operation, insight in chromatographic media, dynamics of chromatography, effects of dispersion and extra column effects. The experimental part will comprise pulse response experiments, dynamic binding capacity, shallow bed experiments, and linear gradient elutions. The experiments will be carried out with typical conventional porous media exhibiting different transport mechanisms. Participants will be also trained in the pitfalls of peak fitting and evaluation of chromatographic data. Detailed course notes will be provided. At the end of the course a detailed protocol has to be worked out.

Who should attend?

The course is aimed at those already employed in industry who is interested in getting more information out of their chromatographic data as well as PhD-students, Post Docs and those working in research laboratories. The participants will work in groups of 3-4 and should have some practical experience in performing chromatographic experiments. No particular background in chromatographic theory is required but a basic knowledge in separation science is an advantage.

Duration and location

The course will be given from Sunday 7th of June to Friday 12th of June 2020.

The course will be held at the

Department of Biotechnology
University of Natural Resources and Life Sciences, Vienna
Muthgasse 18
A-1190 Vienna, Austria
Phone: 0043 1 47654 79083, Fax: 0043 1 47654 79009
E-mail: alois.jungbauer@boku.ac.at

Lunches, a reception on Sunday 9th of January and the course dinner on Thursday 13th of January 2022 will be provided. For other meals, a variety of restaurants may be found in Vienna.

Accommodation

Hotel or student hostel accommodation can be arranged at your request addressed to Petra Polak BA (petra.polakg@boku.ac.at).

Fee and registration

If you are interested, please fill in and return the attached form. Participants in the course are restricted to 20 people.

The fee is:

3,200 Euro in case of payment **before** 31st of October 2021
3,400 Euro in case of payment **after** 1st of November 2021
2,000 Euro for PhD students

The fee includes course materials, laboratory expenses, lunches and coffee breaks, the reception on Sunday 9th of January 2022 and the course dinner on Thursday 13th of January 2022. The fee does not cover other meals and lodging.

In the event of cancellation **before 15th of November 2022** a full refund will be granted, after this date, a 25% fee charge will be made.

Course outline

The lectures and exercises will be given by Professor Alois Jungbauer, Department of Biotechnology, University of Natural resources and Life Sciences and Professor Giorgio Carta, Department of Chemical Engineering, University of Virginia. Experiments will be performed on ÄKTA Pure. For each chromatography workstation one tutor will be available.

Detailed course notes including simulation programs will be provided. The instructors have also published a book covering the theory and examples given during the course.

Current time schedule

Sunday, January 9th

16:30	Registration
17:00	Introduction to the course
17:30	Downstream processing of biotechnological products
19:00	Dinner

Monday, January 10th

09:00	Introduction to chromatography, definitions, models of operation
11:00	The chromatographic workstation
12:30	Lunch break
13:30	Experiments I (pulse response experiments, fitting of data)
16:30	Categories of chromatographic media

Tuesday, January 11th

09:00	Evaluation of experiments I
11:00	Sorption equilibrium
12:30	Lunch break
13:30	Determination of binding capacity
14:30	Experiments II (breakthrough curves)

Wednesday, January 12th

09:00	Evaluation of experiments II
11:00	Local equilibrium dynamics, ideal chromatography
12:30	Lunch break
13:30	Linear gradient elution
14:30	Experiments III (LGE, peak position and HETP from LGE)

Thursday, January 13th

09:00	Evaluation of experiments III
11:00	Effects of dispersion
12:30	Lunch break
13:30	Effects of dispersion and extra column effects
14:30	Experiments IV
19:00	Course dinner

Friday, January 14th

09:00

Evaluation of experiments IV

11:00

Summary of course and protocol

Please note: The time table is currently just an overview of the content.

Book covering the content of the course – Recommended additional literature

1. Edition - April 2010

99.- Euro

2010. XVIII, 346 Pages, Hardcover

178 Fig. (3 Colored Fig.), 45 Tab.

- Practical Approach Book -

ISBN-10: 3-527-31819-4

ISBN-13: 978-3-527-31819-3 - Wiley-VCH, Weinheim
